HDOC DAY 76

PROBLEM

1. Create an enumeration for user roles (ADMIN, USER, GUEST) and display messages based on role.
    a. Input: GUEST
    b. Output: Welcome Guest
2. Print all enum names and integer values of 12 colors using a loop.
    a. Input: No Input
    b. Output: RED=0, BLUE=1, GREEN=2

CODE 1

```
#include <stdio.h>
#include <string.h>

enum Role
{
  ADMIN,
  USER,
  GUEST
};

int main()
{
  char input[20];
  enum Role role;

  printf("Enter role: ");
  scanf("%s", input);
```

```
if (strcmp(input, "ADMIN") == 0)
   role = ADMIN;
else if (strcmp(input, "USER") == 0)
   role = USER;
else if (strcmp(input, "GUEST") == 0)
   role = GUEST;
else
{
   printf("Invalid Role");
   return 0;
}

switch (role)
{
   case ADMIN:
      printf("Welcome Admin");
      break;

   case USER:
      printf("Welcome User");
      break;

   case GUEST:
      printf("Welcome Guest");
      break;
}
```

```
    return 0;
}
```

CODE2

```
#include <stdio.h>

enum Color
{
    RED,
    BLUE,
    GREEN,
    YELLOW,
    ORANGE,
    PURPLE,
    PINK,
    BROWN,
    BLACK,
    WHITE,
    GRAY,
    CYAN
};

int main()
{
    char *names[] = {
        "RED", "BLUE", "GREEN", "YELLOW",
        "ORANGE", "PURPLE", "PINK", "BROWN",
        "BLACK", "WHITE", "GRAY", "CYAN"
    };
```

```
    for (int i = RED; i <= CYAN; i++)
    {
        printf("%s=%d", names[i], i);

        if (i < CYAN)
            printf(", ");
    }

    return 0;
}
```
