HDOC DAY 45

PROBLEM

Write a menu-driven C program to perform the following operations using separate functions:

- Change the date format from dd/mm/yyyy to dd-mmm-yy. **E.g.** Input: 12/10/2026, Output: 12-Oct-26
- Print all sub-strings of a string. **E.g.** Input: abc, Output: a,ab,abc,b,bc,c

CODE

```
#include <stdio.h>
#include <string.h>

// Function to convert date format
void changeDateFormat()
{
   int day, month, year;
   char *months[] = {
      "Jan", "Feb", "Mar", "Apr", "May", "Jun",
      "Jul", "Aug", "Sep", "Oct", "Nov", "Dec"
   };

   printf("Enter date (dd/mm/yyyy): ");
   scanf("%d/%d/%d", &day, &month, &year);
```

```
    if (month < 1 || month > 12 || day < 1 || day > 31) {
        printf("Invalid date!\n");
        return;
    }

    printf("Formatted date: %02d-%s-%02d\n",
           day, months[month - 1], year % 100);
}

// Function to print all substrings
void printSubstrings()
{
    char str[100];
    int i, j, k, len;

    printf("Enter a string: ");
    scanf("%99s", str);

    len = strlen(str);

    printf("All substrings:\n");

    for (i = 0; i < len; i++) {
        for (j = i; j < len; j++) {
            for (k = i; k <= j; k++) {
                printf("%c", str[k]);
            }
            printf(", ");
```

```
    }
  }

  printf("\n");
}

int main()
{
  int choice;

  do {
    printf("\n----- MENU -----\n");
    printf("1. Change date format\n");
    printf("2. Print all substrings\n");
    printf("3. Exit\n");
    printf("Enter your choice: ");
    scanf("%d", &choice);

    switch (choice) {
      case 1:
        changeDateFormat();
        break;

      case 2:
        printSubstrings();
        break;

      case 3:
```

```
            printf("Exiting program.\n");
            break;

        default:
            printf("Invalid choice! Try again.\n");
    }
  } while (choice != 3);

  return 0;
}
```
